Discovery Findings

[Address discovery discussions/pain points and introduce solutions that could answer client needs]

Solution Overview

Emsi will provide [Insert College Name Here] with access to Analyst, our labor market data software. With it, [Insert College Name Here] gets unlimited access to industry, occupation, education and demographic data within the contract-specified regions. Optional business data and regionalized job posting analytics (JPA) give [Insert College Name Here] even greater insight into regional needs. The subscription begins at the specified start-date and is renewed annually.

Features

Analyst uses highly structured **traditional labor market data** and **real-time labor market data**. Both types of data are contextualized for the regions your select. The data is updated quarterly and gives you access to historic data from 2001 and 10-year projections.

In addition, your institution will receive ongoing training and technical support from our team, including optional official Analyst certification.

Functionality

- Regional industry, occupation, program, and demographic analysis
- Job posting analytics that cover skills, certifications, job titles, and companies
- Input-output model
- User-friendly GIS tool
- Exportable reports in PDF, Excel, and Word
